

## Aviation safety takes off with SkyNet's enhanced ADS-B / Satcom Hybrid

The next generation of flight safety management.

SkyNet's ADS-B / SatCom Hybrid ensures a constant flight watch service, providing improved safety, lower operational costs and greater overall efficiencies.

Typically, ADS-B equipped aircraft that fly at high altitudes will always be within ADS-B coverage. However, when flying at lower altitude aircraft may move out of coverage and out of communication. With ADS-B / SatCom Hybrid, services are seamlessly switched to satellite ensuring the aircraft's position is always known.

SkyNet provide instructions via satellite to each aircraft as it moves in and out of ADS-B coverage as to which tracking network to use. This ensures the aircraft's location is always accurate, and data is sent via least cost routing.

Data from both ADS-B and satellite systems is displayed through SkyNet's AIS service enabling seamless tracking while maintaining high visibility, continuous messaging, and flight watch service.

## SatTrack Micro. Safety Just Got Personal.

SKYNET is pleased to announce the release of the SatTrack Micro. A small, light weight personal GPS tracking device that can be carried on a key ring or discreetly on a person, enabling you to remotely track & trace your personnel or a variety of objects, e.g. cars, trucks, containers, motorcycles etc.

Big Isn't It. the SkyNet SatTrack Micro.

In addition, the SatTrack Micro includes a dedicated duress ( SOS ) button with the capability to provide detailed location information.

All communication is handled rapidly and effectively by a GPRS / GSM modem. In areas without network coverage, position-data and events are stored in memory ( up to 55,000 positions ). As soon as communication is restored, all information can be transmitted.

## Online News : The New SkyNet Website

With SkyNet's expansion into multiple markets globally, the time was right to completely revamp our website to include the various Aero, fleet, safety, Maritime and personnel solutions. So, whether you require tracking for your vehicles, duress for your personnel, or real time monitoring of your aircraft, SkyNet's new website makes finding solutions to your problems an easy task.

Browse the solutions we offer, find detailed product information, and get in touch with our sales team about how we can help you.
